

NATURAL GAS FACILITIES Process Safety Management (PSM) Program

CLIENT

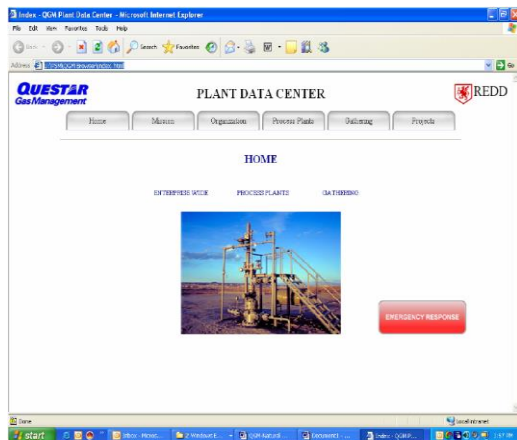

QUESTAR GAS MANAGEMENT

PROJECT DESCRIPTION

Through maintaining PSM compliance, QGM aims to be the most productive, efficient and safe mid-stream operations company in the natural gas industry.

Specifically, QGM seeks to achieve sustainable performance-based competitive advantage through excellent operations management and zero incidents (safety, health and environmental), supported by world class best practices in a culture of continuous improvement.

REDD Performed necessary tasks needed to bring plant documentation into compliance with OSHA 1910 PSM as well as provide up to date piping and instrument diagrams for plant operations, maintenance and engineering.

SERVICE FEATURES

- Maintained and updated plant data including Process Safety Information (PSI) as needed including field verification of the piping, equipment and systems of each facility
- Provided access to current plant data through web based browser
- Performed Process Hazard Analysis (PHA) and assisted in the completion of Recommendation Items
- Assisted with Management of Change (MOC) including engineering review and study
- Prepared PSM Training sessions to inform employees of procedures and implementation
- Prepared Mechanical Integrity schedule and maintained reports and schedule
